System Overview

With its multi-core processor, the Smart ANPR Camera Series delivers high quality images. It uses deep learning algorithms and the high performance CMOS image sensor to perform detection 24/7 and take snapshots of both motor and non-motor vehicles. Cameras in this series can extract attributes such as the model, logo, series and color of vehicles. They also contain various types of signal communication ports, which can meet the requirements for control over peripherals such as barriers and radars.
